EMOLLIENTS AND BARRIER CREAMS

DISCUSSION WILL FOCUS ON:

Optimising Referrals

Who should be referred? How do we maximise a 10 minute appointment? Could unnecessary referrals lead to de-skilling in primary care?

Getting It Right First Time

What does GIRFT look like in practice? How do we get referrals right first time? Are there ways to improve adherence to topical treatments?

Reducing 'revolving door' patients

Could supported self-care reduce the number of 'revolving door' patients? What other effective strategies could be used? Do we have sufficient resources for these patients?
